Brief summary of files and content:

<b>Challenge1.py</b>	Utilise built-in microphone to develop a beat detection code <ul style="list-style-type: none"><li>• Combine beat detection with loudness</li><li>• Light up LEDs synchronised with music</li></ul>
<b>Challenge2.py</b>	Control speed and direction of motors using IMU <ul style="list-style-type: none"><li>• Control speed and direction with potentiometer</li><li>• Combine with ability to derive pitch and roll angles from IMU measurements</li><li>• Display each motor on OLED display</li></ul>
<b>Challenge3.py</b>	Implement PID controller for speed of motors <ul style="list-style-type: none"><li>• Demonstrate PID control algorithm is functioning</li><li>• Apply pressure to increase friction (video)</li></ul>
<b>Challenge4.py</b>	Dancing Segway (w/o balancing) <ul style="list-style-type: none"><li>• Attach stabilisers to Segway</li><li>• Develop dancing code with combination of beat detection from Challenge1.py</li></ul>
Challenge4Moves.py	Dance choreography file
<b>Challenge5.py</b>	Self-balancing the Segway <ul style="list-style-type: none"><li>• Implement a PID algorithm using the pitch angle as the set-point variable and control the motors to maintain the pitch angle to be zero (post-calibration)</li></ul>
Challenge5PID.py	PID controller for challenge 5
Challenge5Motor.py	Motor function for challenge 5
Challenges.pdf	<ul style="list-style-type: none"><li>• Brief for each challenges and criteria</li></ul>

We use the following standard modules:

- boot.py
- drive.py
- font.py
- main.py
- mic.py
- motor.py
- mpu6050.py
- oled\_938.py
- pybench.py
- user.py
